Why Use RGF's REME-HALO® Technology?

The PIP-MAX® utilizes RGF's patented REME-HALO® active air treatment technology to substantially reduce airborne and surface bacteria, viruses, odors, mold and VOCs (chemical odors). Active air treatment is the process of reducing air and surface contaminants by recreating and distributing natural levels of hydrogen peroxide in occupied areas. The ion generators are used to restore the natural levels of ions in the conditioned space, reducing airborne particulate such as pollen, dust, and smoke. This is done to accelerate the agglomeration of the airborne particles making them easier to capture in filters.
