

HVAC Condensate Pump Tray

Purpose:

Built for use in condensate pump installations, our aluminum condensate pump tray provides the extra layer of protection your system needs to prevent unexpected water damage. Designed to fit most condensate pumps, it offers a sturdy, corrosion-resistant alternative to outlast plastic trays while providing a secure mounting option. To enhance performance, we've added insulation to minimize condensate drip and reduce pump vibration. Power cord mounting holes at both ends make installation easier and more efficient. Safeguard your condensate pump installations using this rugged, reliable leak protection option.

Assembly:

RGF's condensate pump tray is constructed from 1/16" aluminum for durability and corrosion protection. The lightweight design features welded corners for maximum safety and leak prevention. The integrated 1/8" foam insulation helps prevent condensation buildup while dampening vibrations, ensuring quieter operation. Dedicated power cord mounting holes with 3/4" split grommets further simplify installation and electrical safety.
